

CO-LOCATION

For most businesses, building, expanding and supporting the facilities that house network architecture and infrastructure can be a major financial roadblock to success.

Located centrally in the Sydney CBD, the Anchor data centre is configured to provide a highly secure and reliable environment for the operation of applications which demand very high levels of availability.

Our solutions are scalable in order to meet the ever changing demands of our clients and with 24x7 support and monitoring, you can rest assure that our staff will resolve any issue or concern you may have while enabling you to concentrate on your core business and services.

INTENDED APPLICATIONS

Co-Location is intended for clients who want high availability, connectivity and security for their servers. We provide a secure data centre with optional off site back up and we guarantee the connectivity to the internet of your applications. Our environment provides redundant power and 24x7 monitoring and support, ensuring we meet our SLA's of 99.8% uptime.

DATA CENTRE INFRASTRUCTURE

Our state of the art facilities are equipped with the latest safety and security features, enabling us to guarantee 99.8% uptime of your servers. They include

- Battery backup power
- Dual diesel generators
- Redundant core network
- Multiple Internet providers
- 24 x 7 onsite facilities monitoring
- Redundant climate control cooling systems
- VESDA and Gaseous based fire protection

PRICING

Rack-mount servers: \$104.50/month
Managed firewall: \$55/month
Online backups: \$27.50/month
Server monitoring: \$27.50/month

WHAT OUR CLIENTS SAY

There is no question we ask that they do not answer, and the team always goes 'above and beyond' to meet our needs and those of our clients. Well done on an excellent hosting facility.

Steven Traurig – Globalise

VALUE ADDED SERVICES

Anchor goes beyond simply providing a secure environment to house your server. Once co-located with Anchor you can draw on a cost-effective range of services from a shared pool of resources.

Online backups

By simply making a second network connection to your server Anchor can provide you with automated daily offsite tape backups for a fraction of the cost of a tape drive and library.

Managed security services

Drawing on a wealth of security experience and expertise, we can provision a high availability managed firewall to protect your server with fully customisable rule sets and specialist advice.

Email Spam and Virus filtering

All email can be re-routed via our appliance based filtering devices blocking nearly 100% of viruses and over 95% of spam before it ever reaches your server. The service is entirely controlled via a web based interface with no local modifications required to your mail server.

VPN

IPSec compliant virtual private networks can be provisioned over our network infrastructure to provide secure access to your server over the Internet.

Remote reboot

A secure web based interface can be enabled on the power supply to your server giving you the ability to perform a power cycle remotely at any time in the event of a crash.

Server monitoring

Individual services (network, mail, web, database, SSH, FTP) on your server can be polled with outage notifications sent via email or SMS.

DNS & Secondary mail services

Hosting of primary/secondary DNS and secondary mail services can be provided if you don't only need a single server to run your application
